Water Treatment Plant – Iron Removal

Some testing is currently being done on the Water Treatment Plant to improve the iron removal process. During this testing phase some residents may experience weak tea coloured water, this is caused by the iron that they are trying to remove. The water is still potable and safe to drink it is just not aesthetically pleasing.

If you have any concerns with your water please contact the Board of Directors at directors@osoyooscottages.com and/or the Operations Manager at gregc@vanmarengroup.com
